**Memorandum of Understanding (LIGO-M970020-00-M)**  
**between the**  
**Institute of Applied Physics (IAP) of the Russian Academy of Sciences at**  
**Nizhny Novgorod**  
**and the**  
**Laser Interferometer Gravitational Wave Observatory (LIGO) Laboratory**  
**February 15, 2004**

This Attachment to the Memorandum of Understanding LIGO-M970020-00-M covers the role of the Institute of Applied Physics (IAP) of the Russian Academy of Sciences at Nizhny Novgorod as a member of the LIGO Scientific Collaboration (LSC) and a member of the Lasers/Optics Development Group (LODG). The period of performance for the activities in this Attachment is from February 15, 2004 to August 15, 2004. This period may be modified by agreement to a revision of this Attachment.

1. LIGO Scientific Collaboration - The LIGO Scientific Collaboration is organized as a separate organization from the LIGO Laboratory. It includes scientists from the LIGO Laboratory, and those from collaborating institutions, and has its own leadership and governance. The Collaboration will ensure equal scientific opportunity for individual participants and institutions. It will organize the research, publications, and all other scientific activities. The Collaboration will report to the Laboratory Directorate for final approval of its research program, technical work, observational physics publications, and talks announcing new observations and physics results. This will be done through regular reports to the Directorate and its PAC.
2. Charter Membership - An initial period for formation of the Charter group of institutions in the LIGO Scientific Collaboration commenced on March 1, 1997 and ended following the first full meeting of the Collaboration at which the Collaboration Council assumed its role.

Following the charter period proposals will be evaluated through the Collaboration Council. With Collaboration approval, an MOU with the LIGO Laboratory, including Attachments defining specific work, will be required for any participating institutions.

3. This document is an agreement between the Institute of Applied Physics (IAP) of the Russian Academy of Sciences at Nizhny Novgorod and the LIGO Laboratory concerning the activities of the Institute of Applied Physics (IAP) of the Russian Academy of Sciences at Nizhny Novgorod as a Collaborating Institution in the LIGO Scientific Collaboration (LSC) and in the Lasers/Optics Development Group (LODG), and as indicated in item No. 8.
4. Lasers/Optics Development Group - The Lasers/Optics Development Group (LODG) is the scientific collaboration for defining and developing future high power lasers and required

improvements in optics for use in advanced subsystems for the initial LIGO interferometers or in entirely new advanced interferometers. A specific Attachment will define the roles and responsibilities of groups in this development group. Members of this group will normally be authors in publications reporting the work of the group and will normally be eligible to participate in data runs and science beyond the LIGO I data run.

5. Report of Progress - IAP will provide a status report on its activities in support of LIGO every six months. The report will consist of: a) a summary status on research by topic as indicated item No. 8 below including progress against the milestones if any, significant accomplishments such as new insights/discoveries or publications, issues of concern if any, and an indication of invested time, b) updated List of Collaborators, and c) a plan of activities for the succeeding six-monthly period. The report will be due one month before the close of the period of performance under the Attachment in question.

6. Term of Membership - The Membership will be renewed every six months upon evidence of satisfactory performance of agreed upon duties.

The coordinates of IAP members are included in the Attachment Z to the Memorandum of Understanding LIGO-M970020-00-M.

7. Intellectual Property Rights - The rights to intellectual property developed under this Attachment will be subject to the National Science Foundation Grant Policy as indicated in Section 730, Intellectual Property.
8. During the period February 15, 2004 to August 15, 2004, the IAP research group will pursue the following tasks as its contribution to the LIGO development:
  - a) We will continue to manufacture a white light interferometer for *in situ* measurement of ETM optical thickness in order to implement it in LLO end station according to Proposal.
  - b) We will examine newly developed high aperture (20mm) high power version Faraday isolator for AdLIGO. Thermal coefficient  $dn/dT$  for compensating glass FK51 will be measured.
  - c) We will continue to model bulk (by Nd laser) and surface (by CO<sub>2</sub> laser) heat deposition in AdLIGO Core Optics by means of white light interferometer and scanning Hartman sensor. Experimental results will be compared with simulations.
9. During the period February 15, 2004 to August 15, 2004, LIGO Laboratory will share, as requested and appropriate, the LIGO data of relevance to the research topics in Item No. 8.
10. The research effort pursuant to this Attachment C will be coordinated by Alexander Sergeev and David Shoemaker on behalf of IAP and the LIGO Laboratory, respectively.
11. Resource Sharing: The LIGO Laboratory will contribute resources including allocation of appropriate scientific and engineering personnel, research facilities and funding in support of the effort in item No. 8 as indicated below.

- a) Provide accommodations for IAP investigators while on LIGO research assignment at Caltech, and/or LIGO sites.
- b) Cover travel expenses associated with attendance of IAP investigators at LSC functions, as agreed.
- c) Funding in support of IAP's R&D (in situ investigation of advanced LIGO detector optics) under a subcontract between Caltech and the University of Florida.
