

**Attachment Number A to the**  
**Memorandum of Understanding (LIGO-M950059-00-M)**  
**between the**  
**LSU Experimental Relativity Group (LSUERG) of the Louisiana State**  
**University**  
**and the**  
**Laser Interferometer Gravitational Wave Observatory (LIGO) Laboratory**  
**August 15, 1999**

This Attachment to the Memorandum of Understanding LIGO-M950059-00-M covers the role of the LSU Experimental Relativity Group (LSUERG) of the Louisiana State University as a Charter Member of the LIGO Scientific Collaboration (LSC) and a member of the LIGO I Development Group (LIDG). The period of performance for the activities in this Attachment is from August 15, 1999 to February 15, 2000. This period may be modified by agreement to a revision of this Attachment.

1. LIGO Scientific Collaboration - The LIGO Scientific Collaboration is organized as a separate organization from the LIGO Laboratory. It includes scientists from the LIGO Laboratory, and those from collaborating institutions, and has its own leadership and governance. The Collaboration will ensure equal scientific opportunity for individual participants and institutions. It will organize the research, publications, and all other scientific activities. The Collaboration will report to the Laboratory Directorate for final approval of its research program, technical work, observational physics publications, and talks announcing new observations and physics results. This will be done through regular reports to the Directorate and its PAC.
2. Charter Membership - An initial period for formation of the Charter group of institutions in the LIGO Scientific Collaboration commenced on March 1, 1997 and ended following the first full meeting of the Collaboration at which the Collaboration Council assumed its role.

Following the charter period proposals will be evaluated through the Collaboration Council. With Collaboration approval, an MOU with the LIGO Laboratory, including Attachments defining specific work, will be required for any participating institutions.

3. This document is an agreement between the LSU Experimental Relativity Group (LSUERG) of the Louisiana State University and the LIGO Laboratory concerning the activities of LSU-ERG as a Collaborating Institution in the LIGO Scientific Collaboration (LSC) and in the LIGO I Development Group (LIDG), and as indicated in Item No. 9 below.
4. LIGO I Development Group - The LIGO I Development Group is the scientific collaboration for implementing and exploiting the initial LIGO detector and physics through the initial sci-

ence data run. Only groups who establish a specific Attachment approved by the LIGO Laboratory, which defines a sufficient contribution and participation in LIGO I development, implementation or data analysis will be part of this initial LIGO data run and science. Participation in future data runs and science that follow LIGO I will be possible for other groups, with guidelines to be determined by the LIGO Scientific Collaboration. It is anticipated that LIGO I data will only be made available through formal collaboration within the LIGO I Development Group during the first two years following its collection.

The general guideline for institutional membership in the LIGO I Development Group is that the contribution per collaborator of any new group to the design, construction, and implementation of the initial LIGO detector and to the first data run be comparable to that of the LIGO Laboratory scientists.

5. Report of Progress - LSUERG will provide a status report on its activities in support of LIGO every six months. The report will consist of: a) a summary status on research by topic as indicated item No. 9 below including progress against the milestones if any, significant accomplishments such as new insights/discoveries or publications, issues of concern if any, and an indication of invested time, b) updated List of Collaborators, and c) a plan of activities for the succeeding six-monthly period. The report will be due one month before the close of the period of performance under the Attachment in question.
6. Term of Membership - The Membership will be renewed every six months upon evidence of satisfactory performance of agreed upon duties.

The coordinates of LSUERG members are included in the Attachment Z to the Memorandum of Understanding LIGO-M950059-00-M.

7. Intellectual Property Rights - The rights to intellectual property developed under this Attachment will be subject to the National Science Foundation Grant Policy as indicated in Section 730, Intellectual Property.
8. Software Deliverables for LIGO I

It is necessary that any delivered code conforms to the LLAL style as laid out in the LLAL specification T990030. This includes; 1) coding style, headers, etc; 2) use of function calls, etc; 3) organization of software in the directory structures indicated in the document; 4) inclusion of test codes and validation tests to enable users to very successful installation of implementing; and 5) documentation to enable users to understand and adopt code.

9. During the period August 15, 1999 to February 15, 2000, LSUERG members Warren Johnson, Joe Giaime, Bill Hamilton, Robert Svoboda, Roger McNeil and Giovanni Santostasi will be involved as follows:

a) Seismic Isolation and Suspension

J. Giaime will measure the transmission, in-vacuum, of LLO seismic isolation stack.

b) Data Analysis

W. Johnson will demonstrate an FFT-based algorithm. The algorithm is a Wiener filter tuned for stationary noise removal, including sharp lines. The algorithm's performance will be tested on a data set that roughly resembles an interferometer output. An attempt will be made to demonstrate that this is a general and powerful technique for "anomaly detection" of a general kind.

R. McNeil will familiarize himself with the global diagnostics system requirements in preparation for his participation in the system installation and operation.

c) Supernova Monitor

R. Svoboda will determine the feasibility of including LIGO in the Supernova Monitor project. This effort will include identifying the necessary hardware, software and data exchange protocols and reporting on the same to the LSC. The Supernova Monitor project is operating as a collaboration between neutrino detectors.

d) LLO Directorship

J. Giaime will continue as part-time director at LLO, under the supervision of Dennis Coyne of LIGO-Caltech staff.

10. During the period August 15, 1999 to February 15, 2000, the LIGO Laboratory will share, as requested and agreed, LIGO data of relevance to research topics in Item No. 9 above.
11. The research effort pursuant to this Attachment A will be coordinated by W. Johnson, and Albert Lazzarini and Syd Meshkov on behalf of LSUERG and the LIGO Laboratory, respectively.
12. Resource Sharing: The LIGO Laboratory will contribute resources including allocation of appropriate scientific and engineering personnel, research facilities and funding in support of the effort in Item No. 9, as indicated below. These resources will be in addition to the coordination effort and data to be made available per Item No. 10 above.
  - a) Provide accommodations for LSUERG investigators while on LIGO research assignment at Caltech, and/or LIGO sites.
