

NOTES :-

- 1) * For Silica
206 mm becomes 219mm & 1948 mm becomes 1961 mm.
- 2) All of this will be updated in next release of LIGO-T030137, sometime in July.
- 3) Cf. Overall height in footprint was 2005 mm. The reduction by 57mm is due to the fact we did not use up all of the original 106mm allocation between the test mass & the bottom of the structure.
